GANDHI INSTITUTE OF TECHNOLOGY AND MANAGEMENT (GITAM)

(Deemed to be University)

VISAKHAPATNAM | HYDERABAD | BENGALURU

Accredited by NAAC with A++ Grade

Regulations and Syllabus of B.Sc. Emergency Medical Technology (W.e.f. 2024-2025 admitted batch)

B.Sc. EMERGENCY MEDICAL TECHNOLOGY

(Effective from 2024-25 Admitted batch)

ADMISSIONS

Admissions into Allied and Healthcare Professions (Specialization in Emergency Medical Technology) program of GITAM (Deemed to be University) are governed by GITAM (Deemed to be University) admission regulations.

ELIGIBILITY CRITERIA

Eligibility:

- He/She has passed the Higher Secondary (10+2) or equivalent examination recognized by any Indian University or a duly constituted Board with pass marks (50%) in Physics, Chemistry, Biology.
- He/She has attained the age of 17 years as on current year & maximum age limit is 30 years.
- For the candidates who have studied abroad, the rules of GITAM (deemed to be University) will be followed.

ABOUT THE COURSE:

Emergency medical technician is an entry-level emergency medical technician who is trained in emergency care skills, such as IV cannulation, oxygen therapy, physical examination, assisting emergency child birth and essential newborn care, automated external defibrillation, airway maintenance, CPR, spinal immobilization, bleeding control, and fracture management. An EMT is trained for administration of medications always under medical direction over radio or phone. An EMT helps a wide variety of people in need of care. Some patients, such as victims of a cardiac episode, depend on emergency medical services to literally save their lives. Others will rely on support and care for what may seem a relatively minor complaint but that has caused them to become a patient in need. In either case, an EMT plays a critical role in the healthcare system. An EMT is often be the first medical care provider to see and care for the patient. An emergency medical services system (EMSS) is the planned configuration of community resources and personnel necessary to provide immediate medical care to patients with sudden or unexpected illness or injury.

COURSE ADMINISTRATION

- The course is delivered in 8semesters with each semester dealing with prescribed subjects.
- All subjects are mandatory for the student. The student is trained in both theory and practical/clinical aspects of the course. Student is assessed by formative and summative assessment every semester.
- There will be on internal exam before the semester –end exam. Candidates should score

• A minimum of 35% marks theory and practical internal assessment examination separately to be eligible to appear in the University exam in that subject.

A candidate shall be declared to have passed in the concerned subject, if he fulfills the following criteria

- He/ She secured 35% marks in the internal assessment and
- He/ She secured 40% marks in theory and
- 50% marks in practical & viva and
- 50% marks in theory, practical &viva put together in each subject separately. Course objectives and learning outcomes are specified leading to clarity on what a student would be able to do at the end of the program.

STRUCTURE OF THE PROGRAM

The Program consists of

- Foundation Course (FC)
- Core course (C)

Each academic year consists of two semesters. The curriculum structure of the B.Sc Paramedical program and the contents for various courses offered are recommended by the Board of Studies concerned and approved by the Academic Council.

MEDIUM OF INSTRUCTION

The medium of instruction (including examinations and project reports) shall be English. The method of instruction shall comprise classroom lectures, guest lectures, demonstrations, presentations, role-playgroup discussions, seminars, class tests, case analysis, situational analysis, practical training etc.

ATTENDANCE REQUIREMENTS

➤ A candidate must have not less than 75% attendance in theory and 80% in practicals separately.

ELIGIBILITY TO APPEAR FOR SEMESTER EXAMINATION

- ➤ Candidates should score a minimum of 40% marks theory and practical internal assessment examination separately to be eligible to appear in the University exam in that subject.
- > There will be one internal exam before the semester- end exam.
- ➤ Internal marks will be considered for eligibility for the semester exam but will not be added for the semester exam.

EXAMINATION DURATION AND PATTERN

a. Pattern of question paper (60 Marks): 2 ½ hrs duration

Short notes 6Marks each (5Q) = 30Marks

Very Short Notes 2Marks each (10Q) = 20Marks

MCOs 1Mark each (10Q) = 10 Marks

Subjects:

- Biochemistry
- Microbiology
- Pathology
- General Surgery
- Principles of Laboratory management (For B.Sc. MLT)
- Parent Depts.

b. Pattern of question paper (40 Marks): 2 hrs duration

Short notes 4Marks each (5Q) = 20Marks Very Short Notes 2Marks each (10Q) = 20 Marks

Subjects:

- Introduction to Healthcare Delivery System, Research Methodology & Biostatistics
- Introduction to Quality and patient safety
- Basic Computers and Information Science
- English, Communication and soft skills
- Professionalism & Values
- Principles of management (For B.Sc. Anesthesiology Technology, Optometry, Radiology and Imaging Technology, Renal Dialysis Technology, Emergency Medical Technology)
- Medical Law & Ethics
- Pharmacology
- General Medicine

c. Pattern of question paper (60 Marks [30 + 30]): $2\frac{1}{2}$ hrs duration.

Short notes 3Marks each (5Q) = 15 Marks

Very Short Notes 2Marks each (5Q) = 10 Marks

MCQs 1Mark each (5Q) = 05 Marks

Subjects:

Anatomy-I (Part-A) & Physiology-I (Part-B)

Anatomy-II (Part-A) & Physiology-II (Part-B)

PAPER SETTING

Paper setting, paper valuation and practical examination is done by internal examiners from the I to VI semesters.

CRITERIA FOR EXAMINER

Professor or Associate Professor or Assistant Professor are eligible to be as examiners.

GRACE MARKS

Maximum 5 marks can be awarded to one subject provided he/she passed all the other subjects or these 5 marks can be split for maximum 2 subjects.

PASS CRITERIA

A candidate shall be declared to have passed the examination if he/ she secured...

- (a) 40% marks in theory.
- (b) 50% marks in practical & viva
- (c) 50% marks in theory, practical & viva put together in each subject separately.

EVALUATION:

Single valuation is done for the theory exams and for the practical exams.

REVALUATION:

Revaluation of the theory answer scripts of the end-semester examinations is also permitted on request, on payment of the prescribed fee within seven days from the date of announcement of the results.

REAPPEARANCE FOR BACKLOGS:

A student who has secured 'F' grade shall have to reappear for the examination as per the regulations to improve the grade.

A student who has secured 'F' grade in Project work / Industrial Training etc., has to re-appear for Viva – Voce to improve the grade.

ANSWER SCRIPT VERIFICATION & CHALLENGE VALUATION:

A provision for Answer Book Verification & Challenge Valuation was given on the following conditions.

- The verification is allowed only after announcement of revaluation results in case of UG programs.
- If the student is not satisfied with the marks awarded in revaluation, he/she can apply for Answer Book verification on payment of prescribed fee for each paper (Program) within one week after announcement of Revaluation results.
- If the student is not satisfied with the marks awarded after Answer Script Verification (i.e. Revaluation marks), he/she can apply for Challenge Valuation on payment of prescribed fee for each

paper (Program) within two weeks from the date of Answer Book Verification.

ASSESSMENT GUIDELINES

RELATIVE GRADING

S.No.	Grade	Description	Grade Formula	Grades based on percentile for a normal distribution	Grade Point		
1.	О	Outstanding	Total Marks≥(μ+ 1.5σ)	93.3	10		
2.	A+	Excellent	$(\mu+1.0\sigma) \leq \text{Total Marks} < (\mu+1.5 \sigma)$	84.1	9		
3.	A	Very Good	$(\mu+0.5 \sigma) \le \text{Total Marks} < (\mu+1.0 \sigma)$	69.1	8		
4.	B+	Good	$(\mu$ -0.5 σ) \leq Total Marks $<$ (μ +0.5 σ	30.8	7		
5.	В	Above Average	(μ- 1.0 σ) ≤Total Marks<(μ- 0.5σ)	15.8	6		
6.	C	Average	(μ- 1.5σ)≤Total Marks<(μ-1.0σ)	6.6	5		
7.	P	Pass	40≤Total Marks<(μ- 1.5 σ)	2.2	4		
8.	F	Fail	Total Marks <40	0	0		
9.	Ab	Absent					
10.	S	Satisfactory for Non-graded courses					
11.	U	Unsatisfactory for Non-graded courses					
12.	R		Insufficient attendance in the course				
13.	W	Withdrawal from the course					

In the relative grading system (RG), grades are given based on the other students' scores in the same class. It indicates the academic standing/merit of the student in that class. Here, class means a cohort of students who are taught by the same faculty member and have undergone the same assessment pattern. RG overcomes problems encountered with AG, including inconsistency in the level of the question paper and evaluation etc. This evaluation procedure is adopted for T (Theory), TP (Theory and practical) and certain chosen practical courses. The grades and grade points in the relative grading system are as given below. The class average mark (μ) is taken as the midpoint of 'B+ (Good)' grade, and relative to this and depending on the sigma (σ , standard deviation) value, the other grades are finalized. Grades are assigned based on the percentiles determined for a normal distribution given in the table below.

Computing Grade point averages (SGPA,CGPA)

The procedure adopted for computing the grade point average for the semester and cumulative is as follows: Semester Grade point average(SGPA) for a semester is calculated as:

$$SGPA = \frac{\sum_{i=1}^{n} ||||Ci*Gi||}{\sum_{i=1}^{n} ||||Ci||}$$

where 'n' is the number of courses taken by the student in a semester. 'Ci' represents the number of credits allotted to the course 'i'.

'Gi' represents the grade points secured by the student in course 'i'.

Cumulative Grade Point Average (CGPA): It is calculated as:

$$CGPA = \frac{\sum_{i=1}^{m} |||||Ci*Gi||}{\sum_{i=1}^{m} ||||||Ci}$$

where 'm' is the number of courses graded to date.

'Ci' represents the number of credits allotted to the course 'i'.

'Gi' represents the grade points secured by the student in course 'i'.

The SGPA will be awarded to the students for all the registered courses in a semester. The credits of the failed courses shall also be considered while calculating SGPA/CGPA in a given semester. For cases where multiple attempts have been made to get a letter grade, the last successful attempt will be used for the CGPA calculation.

The additional credits earned by a student over and above the minimum required for a said category in a program will not be considered for the calculation of CGPA. However the courses which contribute towards higher CGPA will be considered for inclusion.

Calculation of CGPA

The CGPA shall be calculated taking into consideration the grades of courses obtained by the candidates in GITAM. In the case of Study Abroad, Twinning, Joint or Dual Degree Programs, the CGPA will be calculated according to the respective policy applicable and prevailing at the time of joining the program.

Incomplete (I) Grade

'I' grade is assigned if the student has any pending assessment components in Internship, Project and research. The student can initiate the request through the Mentor, and an 'I' grade will be posted after receiving the recommendation from the HoD.

Repeat (R) grade

'R' grade is assigned if the student has to repeat the course due to a shortage of attendance. The student has to re-register for the course in the subsequent semesters when the course is next offered by paying the prescribed fees.

Withdrawal (W) grade

'W' grade is assigned if the student has withdrawn from the course within twenty (20) working days of the semester.

Award of class

The cumulative grade point requirement for the award of the class is as follows:

Class	CGPA required
First-class with distinction	7.5 and above
First-class	6.00 - 7.49
Second class	≥ 5.5
Pass class	≥ 5.0

^{*}In addition to the required CGPA of 8.0 or more, the student must have necessarily passed all the registered courses in the first attempt. Distinction will not be awarded if the student fails in ANY subject.

Transcript Format

Based on the above recommendation on letter grades, grade points, SPGA and CGPA, the transcript shall be issued for each semester with a consolidated transcript indicating the performance in all semesters.

VISION:

To become a leader of excellence in healthcare and health professions' education pioneering in experiential learning, redefining compassion, service and self-reliance to produce and nurture the next generation of visionary healthcare professionals

MISSION:

- 1. Develop a need-oriented learning ecosystem promoting critical thinking and holistic development
- 2. Offer evidence-based healthcare training at par with global standards
- 3. Encourage autonomy and innovation for healthcare delivery to achieve atma-nirbhar
- 4. Inculcate a philosophy of empathetic healthcare service within GITAM, fostering passionate health professionals

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

DEO 1	To impart knowledge and skill in accordance with the requirement in basic						
PEO 1	medical sciences and paramedical specialty as relevant						
DEO 2	To impart training required to carry out necessary investigative procedures						
PEO 2	accurately to facilitate proper diagnosis and prognosis of diseases.						
DEC 2	To train the student to perform routine as well as special investigative						
PEO 3	procedures in the concerned paramedical specialty.						
DEC. 4	To impart knowledge and practical training required to operate and maintain						
PEO 4	all equipment used in the concerned specialization.						
	To impart knowledge about communication skills, basic research skills,						
PEO 5	professionalism, and ethical aspects required in various health						
	care settings for effective delivery of health care.						

PROGRAMME OUTCOMES (POs)

	To prepare a cadre of healthcare technologists who can effectively				
PO 1	assist senior health professionals in the delivery of quality health				
	services.				
PO 2	To prepare skilled paramedical human resources for all levels of the				
FO 2	healthcare delivery system from primary to tertiary care level.				
PO 3	To train the students to carry out necessary procedures accurately and				
103	to facilitate proper diagnosis and prognosis of diseases.				
DO 4	To enable to perform routine as well as special investigative procedures in				
PO 4	the concerned paramedical specialty.				
DO 5	To develop knowledge and skill in accordance with the demand in the field				
PO 5	of paramedical specialty as applicable.				
PO 6	To enable to operate and maintain all types of equipment used in the				
POO	concerned specialization.				
PO 7	To make capable to support advanced testing activities and Research.				
PO 8	To enable to work as Supervisor/Trainer/Teacher in the field of Paramedical				
108	sciences.				
PO 9	To enable to communicate and interact effectively with non-clinical and				
103	clinical persons in various healthcare environments.				
PO 10	To be able to present oneself in an ethical and professional manner.				
PO 11	To equip the paramedical staff with modern skills and knowledge to bring				
1011	them at par with other national and international standards.				
PO 12	Students who complete these programs will be able to work in both an				
PO 12	individual and team environment.				
	·				

PROGRAM SPECIFIC OUTCOMES (PSOs)

At the end of course the student will be able to:

PSO 1	Demonstrate knowledge about the healthcare sector and emergency medical care Services.
PSO2	Demonstrate the ability to perform clinical skills essential in providing basic emergency medical care services such as urgent need to respond the emergency calls, assurance of scene safety, precision to call other emergency people, handling different emergency scenarios from clinical emergency to trauma emergency to mass casualty to disaster management, etc.
PSO 3	Demonstrate setting of an ambulance for dealing with emergency situations.
PSO 4	Practice infection control measures.
PSO 5	Demonstrate safe and efficient transferring and ambulation techniques.
PSO 6	Demonstrate techniques to maintain the personal hygiene needs of oneself and the Patient.
PSO 7	Demonstrate actions in the event of medical and facility emergencies.
PSO 8	Demonstrate professional behaviour, personal qualities and characteristics of an Emergency Medical technician.

SUBJECTS FOR SEMESTER EXAMS WITH HOURS AND CREDITS

	Semester - I								
SI. No.	Subject Code	Subject		Hours Credits					Course Type
			Theory	Practical	Total	Theory	Practical	Total	31
1	24CMED1001	Introduction to Healthcare Delivery System in India, Community orientation and clinical visit, Research Methodology & Biostatistics	15	-	15	1	-	1	FC

SEMESTER - I

INTRODUCTION TO HEALTHCARE DELIVERY SYSTEM, RESEARCH METHODOLOGY & BIOSTATISTICS

INTRODUCTION:

The art and science of application of technical knowledge and skills to the delivery of health care to given community, designed in collaboration with related professionals as well as human and social science on one hand and the community on the other hand. Preventive medicine is science and art of preventing disease, prolonging life and promoting physical and mental health and efficacy.

COURSE OBJECTIVES:

- To orient the students with national health programs
- To learn categories and coding of hospital waste and their disposal methods.
- To know various occupational health hazards and prevention and control of them.
- To make the students aware of tabulation of data, measuring mean and SD

SYLLABUS

Hours: Theory 15 Credits: Theory 01

NO. OF UNITS	CONTENT	NO. OF HOURS
I	Introduction to healthcare delivery system	3
	a) Healthcare delivery system in India at primary, secondary and tertiary	
	care, Principles and Elements of Primary Health Care	
	b) National Health Mission	
	c) National Health Policy 2017	
II	National Health Program:	3
	Background objectives, action plan, targets, operations, achievements and	
	constraints in various National Health Programs.	
	Introduction to AYUSH system of medicine and Need for integration of	
	various systems of medicine	
III	Demography & Vital Statistics:	5
	a) Demography – its concept	
	b) Vital events of life & its impact on demography	
	c) Significance and recording of vital statistics	
	d) Census & its impact on health policy	
	Epidemiology:	
	a. Principles of Epidemiology	
	b. Natural History of disease	
	c. Methods of Epidemiological Studies	
	d. Infectious disease epidemiology - dynamics of disease transmission,	
	host defense immunizing agents, cold chain, immunization, disease	
	monitoring and surveillance.	
VI	Research Methodology:	3
	Introduction to research methods	

	2. Identifying research problem	
	3. Ethical issues in research	
	4. Research design	
	5. Basic Concepts of Biostatistics	
	6. Types of Data	
	7. Research tools and Data collection methods	
	8. Sampling methods	
	9. Developing a research proposal	
V	Biostatistics	1
	The objective of this is to help the students understand the basic principles of	
	research and methods applied to draw inferences from the research findings.	

COURSE OUTCOMES:

This course is aimed to make the student to understand national health programs, hospital waste management, occupational health hazards prevention and control of occupational diseases and calculation of measures of central tendency and diagrammatic representation of data.

ANATOMY – I

INTRODUCTION:

Anatomy deals with the structural organization of the human body. Anatomy forms the basis for the practice of medicine. Students need core knowledge of human anatomy as they venture into the clinical domain. The department of anatomy is committed to providing quality education for students by its fully-equipped facilities. Cadaveric dissections & specimens, histology slides, and VARIOUS models provide the ideal environment to learn anatomy during the 1st year of their course.

COURSE OBJECTIVES:

The objective of this subject is to provide an outline of anatomy to improve the students understanding
of the technical and diagnostic procedures used, withspecial emphasis on applied aspects.

SYLLABUS

Hours: Theory: 30 & Credits: 2

Practical: 15; Credits: 0.5

Theory:

UNIT	CONTENT	
	Introduction to anatomical terms and organization of the human body	
	1.Undertanding the anatomical terms relative to position-anterior, ventral, posterior	
	dorsal, superior, inferior, median, lateral, proximal, distal, superficial, deep, prone,	
	supine, palmar and plantar	
	Anatomical planes (axial/ transverse/horizontal, sagittal/vertical plane and	
	coronal/frontal/oblique plane)	
т	2.Describe the Movements (flexion, extension, abduction, adduction, medial rotation,	5
Ι	lateral rotation, inversion, eversion, supination, pronation, plantar flexion, dorsal flexion	5
	and circumduction	
	3. Describe the Cell structure, Cell division,	
	4.Define the Tissue and classify various types, characteristics, classification, location	
	5. Describe the location of Hyaline cartilage, fibrocartilage, elastic cartilage, 6.Describe	
	the Histology of Bone,	
	6. Describe the Features of skeletal, smooth and cardiac muscle.	
11	The Respiratory system	5
II	1. Describe the Structure of the organs of respiration.	J

	2. Describe the morphology of Pleura,	
	3. Describe the Morphology of Lungs, Bronchopulmonary Segments.	
	4. Histology of Lungs	
	Cardiovascular system	
	1. Describe the Morphology of Heart, Internal features of Heart – right atrium and	
III	right ventricle Chambers & Openings of the heart,	8
	2. 2.Classify Types of Circulation and understand Coronary Circulation in detail	
	3. Describe Aorta its parts and its branches.	
	Muscular system types of muscles	
	1. Describe Muscles of Upper Limb including Arm and Fore Arm,	
IV	2. Describe Muscles of back, diaphragm, Muscles of arm, Muscles of Forearm	5
1 V	3. Understand the Significance of Deltoid Muscle,	3
	4. Describe the Muscles of Lower Limb, Muscles of thigh, Muscles of Leg	
	5. Understand the significance of Gluteus Maximus Muscle.	
	1. Describe the Blood vessels of Upper Limb: Arm- Axillary artery, brachialartery	
V	2. Describe arteries of fore Arm - Radial artery, ulnar Artery, medial cubital vein,	7
	3. Describe the Blood vessels of Lower Limb : Thigh femoral artery, popliteal	
	artery	

PRACTICAL:

NO. OF UNITS	CONTENT	NO. OF HOURS
I	Microscopy, Histology of tissues – cartilage, Bone and Lung	2
II	Intercostal space, Heart, Lungs	3
III	Upper Limb – Bones, Muscles, Axillary artery, brachial artery, fore Arm - Radial artery, ulnar Artery, medial cubital vein, Nerves : Axillaries Nerve , Median Nerve, Ulnar Nerve, radial Nerve	4
IV	Lower Limb – Bones, Muscles, Thigh femoral artery, popliteal artery Nerves of Lower Limb: Femoral Nerve, Sciatic Nerve, Obturator Nerve	4
V	Normal X- Rays, Surface markings	2

COURSE OUTCOMES:

- Explains knowledge on the basic anatomy of various regions like limbs, thoracic and abdominal viscera, osteology, neuroanatomy, endocrine system, basic radiology which provides a foundation in completion of the course.
- Explain the anatomy and functions of various Tissues and cells, an organization of a cellular system.
- Understand the functioning of lungs, heart, and blood vessels.

PHYSIOLOGY - I

INTRODUCTION

Physiology is the study of functions and mechanisms in a living system. Physiology focuses on individual organs, cells, and bio molecules carrying out the chemical and physical functions in a living system. The physiological state is the condition of normal function, while the pathological state refers to abnormal conditions, including human diseases.

COURSE OBJECTIVE

• Understand the basic physiological functions of different organs and parts of the human body and important applied aspects.

SYLLABUS

Credits: Theory 03 & Practical 0.5

Hours: Theory 45 & Practical 15

NO. OF UNITS	CONTENT	NO. OF HOURS
I	Cell Physiology	05
	1. Describe the structure and functions of cell	
	2. Describe the functions of the cell organelles	
	3. Describe briefly the types of transport across cell membrane and carrier	
	systems.	
II	Blood Physiology and Immunology	12
	1. Describe the normal composition of human blood and its functions	
	2. Describe the normal plasma proteins & their functions	
	3. Describe the structure and functions of RBC and hemoglobin	
	4. Describe the process of Erythropoiesis	
	5. Describe the Structure, production, & functions of WBCs	
	6. Describe the structure, production & functions of Platelets	
	7. Describe the Types of blood groups and their importance,	
	8. Describe the Mechanism of coagulation	
	9. Define immunity and describe the types of immunity	
	10. Classify antigen & antibodies	
	11. Describe T cell immunity & B cell immunity	
III	Muscle & Nerve Physiology; ANS	08
	1. Describe the physiological structure of muscle tissue and its types	

	2. Describe the parts of neuron and their functions, and the synapse and its		
	function		
	3. Describe the action potential, its basis, refractory period, latent		
	period, etc. and neuromuscular transmission		
	4. Describe briefly the autonomic nervous system and the		
	functions and effects of the sympathetic and parasympathetic		
	nervous systems		
IV	Digestive System	08	
	1. Describe briefly the Physiological anatomy of G.I.T and its functions.		
	2. Describe briefly the composition and functions of Saliva		
	3. Describe briefly the physiological anatomy of the stomach and		
	the composition, functions of gastric juice.		
	4. Describe briefly the functions of pancreas, and the		
	composition & functions of pancreatic juice.		
	5. Describe briefly the functions of liver and gall bladder and the		
	Composition, and functions of bile juice.		
V	Respiratory System	12	
	Describe the physiological structure and functions of Respiratory		
	tract.		
	2. Describe the Mechanics of respiration and its regulation		
	3. Describe the Fundamentals of oxygen and CO2 transport in blood		
	4. Describe the lung volumes, spirometry & their importance		
	PRACTICAL		
NO. OF UNITS	CONTENT	NO. OF HOURS	
	Estimate Hemoglobin in given blood sample, Estimate bleeding time &		
I	clotting time	04	
II	Perform RBC count of given blood sample	02	
111	Perform WBC count of given blood sample	04	
III	Perform a differential WBC count of the given sample	04	
IV	Calculation of blood indices, Determination of Blood Groups	03	
V	Amphibian Nerve muscle charts	02	

COURSE OUTCOMES:

• Explain the anatomy, physiology and functions of various Tissues and cell, organization of cellular system.

- Explain Hematopoietic and lymphatic system homeostatic and its altered physiology.
- Explain the anatomy and Physiology of the cardiovascular and respiratory system and its disorders.
- Explain the anatomy and Physiology of digestive, urinary, and reproductive systems and their disorders.
- Describe the Physiology of muscle contraction and its disorders.

INTRODUCTION TO QUALITY AND PATIENT SAFETY SYLLABUS

Theory: 60 hrs Credits 4 Practical/Clinical: 60hrs

RATIONALE: The subject will introduce the students to the basic concepts of quality in health care and develop skills to implement sustainable quality assurance program in the health system. It will sensitize them in basic emergency care, infection prevention & control with knowledge of bio medical waste management and antibiotic resistance.

NO. OF UNITS	CONTENT	NO. OF HOURS
I	Quality assurance and management 1. Concepts of Quality of Care 2. Quality Improvement Approaches	10
	3. Standards and Norms4. Quality Improvement Tools5. Introduction to NABH guidelines	
II	 Basics of emergency care and life support skills Vital signs and primary assessment Basic emergency care – first aid and triage Ventilations including use of bag-valve-masks (BVMs) Choking, rescue breathing methods One- and Two-rescuer CPR Using an AED (Automated external defibrillator). Managing an emergency including moving a patient 	10
III	Bio medical waste management and environment safety 1.Definition of Biomedical Waste 2.Waste minimization 3.BMW – Segregation, collection, transportation, treatment and disposal (including color coding) 4.Liquid BMW, Radioactive waste, Metals / Chemicals / Drug waste 5.BMW Management & methods of disinfection 6.Modern Technology for handling BMW 7.Use of Personal protective equipment (PPE) 8.Monitoring & controlling of cross infection (Protective devices	8
	Infection prevention and control 1. Evidence-based infection control principles and practices [such as Sterilization, Disinfection, Effective hand hygiene and use of Personal Protective Equipment (PPE)]. 2. Prevention & control of common healthcare associated infections 3. Components of an effective infection control program, and 4. Guidelines (NABH and JCI) for Hospital Infection Control	12
IV	Antibiotic Resistance 1. History of antibiotics 2. How resistance happens and spreads 3. Types of resistance- intrinsic, acquired, passive 4. Trends in drug resistance 5. Actions to fight resistance 6. Bacterial persistence 7. Antibiotic sensitivity 8. Consequences of antibiotic resistance	10

	9. Antimicrobial Stewardship – Barriers and opportunities, tools and models in hospitals	
	Disaster preparedness and management	
	1. Fundamentals of emergency management	
	2. Psychological impact management	
3.7	3. Resource management	10
V	4. Preparedness and risk reduction	10
	5. Key response functions (including public health, logistics and	
	governance, recovery, rehabilitation and reconstruction), information	
	management, incident command and institutional mechanisms.	

SUGGESTED READINGS:

- 1. The Essentials of Patient Safety by Charles Vincent
- 2. Laboratory quality control and patient safety by De Gruyter
- 3. Essentials of applied microbiology for nurses including infection control and safety by Apurba

PRACTICAL/ CLINICAL

No. OF UNITS	CONTENT	No. OF HOURS		
I	QUALITY AND PATIENT SAFETY	10		
	a) Discussion on Concepts of Quality of Care			
	b) Approaches to Quality Improvement			
	c) Quality Improvement Tools			
	Discussion on NABH guidelines and its exercises			
II	BASICS OF EMERGENCY CARE AND LIFE SUPPORT SKILLS	10		
	1. Vital signs and primary assessment			
	2. Basic emergency care – first aid and triage			
	3. Ventilations including use of bag-valve-masks (BVMs)			
	4. Choking, rescue breathing methods			
	5. One- and Two-rescuer CPR			
	6. Using an AED (Automated external defibrillator).			
	Managing an emergency including moving a patient Students should			
	perform the maneuvers in simulation lab and to test their skills with			
	focus on airways management and chest compressions.			
III	BIO MEDICAL WASTE MANAGEMENT AND ENVIRONMENT	8		
	SAFETY			
	1. Visit to Central Sterile Supply Department (CSSD)			
	2. Visit to incinerator complex			
	3. Visit to Immunization section			
	4. Discussion on Biomedical Waste,			
	5. Demonstration of Types of waste generated from Health Care			
	Facility			
	6. Discussion on waste minimization			
	7. Poster presentation of BMW – Segregation, collection,			
	transportation,			
	treatment and disposal (including color coding)			
	8. Discussion on Liquid BMW, Radioactive waste, Metals / Chemicals /			

_	<u> </u>	
	Drug waste	
	9. Visit to Central Sterile Supply Department for demonstration of BMW	
	Management & methods of disinfection	
	10. Modern Technology for handling BMW e.g. Incinerator, Shredder	
	etc.	
	11. Demonstration of proper use of Personal protective equipment (PPE)	
	12. Demonstration of monitoring & controlling of cross infection	
	(Protective devices)	
	INFECTION PREVENTION AND CONTROL	12
		12
	1. Demonstration of evidence-based infection control principles and	
	practices [such as Sterilization, Disinfection, Effective hand hygiene and use of Personal Protective Equipment (PPE)],	
	2. Discussion on prevention & control of common healthcare associated	
	infections,	
	3. Preparing Charts & Posters of Components of an effective infection	
	control program, and	
	4. Guidelines (NABH and JCI) for Hospital Infection Control	
IV	ANTIBIOTIC RESISTANCE	10
1	1. Discussion on various types of Antibiotics	10
	2. Demonstration of how Resistance Happens and Spreads	
	3. Discussion on types of resistance- Intrinsic, Acquired, Passive	
	4. Antibiotic sensitivity testing	
	5. Display of Consequences of antibiotic resistance	
	6. Demonstration of Antimicrobial Barriers and opportunities, Tools and	
	models in hospitals	
V	DISASTER PREPAREDNESS AND MANAGEMENT	10
	1. Discussion on fundamentals of emergency management,	
	2. Management psychological impact	
	3. Discussion on; 3.1 Resource management, 3.2 Preparedness	
	and risk reduction	

BASIC COMPUTERS AND INFORMATION SCIENCE

INTRODUCTION:

Computer science spans theoretical disciplines (such as <u>algorithms</u>, <u>theory of computation</u>, and <u>information</u> <u>theory</u>) to <u>practical disciplines</u> (including the design and implementation of <u>hardware</u> and <u>software</u>). It deals with concepts regarding the architecture of a computer, common application software and uses of computers in everyday life.

COURSE OBJECTIVES:

To build necessary concepts regarding the architecture of a computer

To develop an understanding of the common application software.

To understand the uses of computers in everyday life.

SYLLABUS

Theory 15 hrs. & Credit 1 Practical 30hrs.

NO OF UNITS	CONTENT	NO. OF HOURS	NO. OF PRACTICAL
I	 Describe and identify the principal components of a computer Define the various terms used in computer – hardware/software / operating system Describe the functions and uses of computers including in health care 	2	4
II	 Mention the common types of files including Word documents, Spreadsheets (Excel) and Presentations (PowerPoint) and their uses Basic Network connecting Explain the uses of the internet and email Collaborative work using Google suite of applications / Microsoft Office 365 	2	6
III	 Demonstrate use of a computer for common purposes Demonstrate methods for Data storage & retrieval and making folders; Perform functions like date/time setting or changing, change display settings, Installing /removing programs etc. Understand and Use MS Word / Word Document program Prepare a properly formatted, spell-checked document in Word Document including insertion of images and tables and take a print-out/mail as an attachment, and convert to pdf (portable document format) Understand and Use MS Excel / Data spreadsheet Prepare a proper Excel document (spreadsheet) with given data and sort out data, insert / delete cells, etc., use formula bar for common functions like calculate mean etc, convert to pictorial format like bar / pie diagram, etc. 	5	10

	8. Prepare and use computer-based presentations like PowerPoint with appropriate fonts and colors including insertion of images, videos etc.		
IV	 Prepare an appropriate file like excel to enter patient data and retrieve it Use the facility of Mail Merge between Excel to a Word document Sending customized email to selected members. Prepare a patient report and take a print out 	3	6
V	 Prepare a database of patient info and lab results for storage and later retrieval Communicate by e-mail including opening email account Demonstrate use of search engines / Google search etc. for academic information Elements of Health Information - Definition, Key Features, Comparison with traditional methods, Benefits, Emerging Trends, and Challenges 	3	4

LEARNING OUTCOMES:

- At the end of the training program, the student would be able to
- Classify various components of the computer.
- Experiment with the various application software of Microsoft Office suite.
- Make use of collaborative applications over the internet

COURSE OUTCOMES:

At the end of the course student is expected to

- 1. Know about the concept and architecture of a computer
- 2. To understand the common application software.
- 3. To understand and apply the uses of computers in everyday life.

ENGLISH, COMMUNICATION & SOFT SKILLS

INTRODUCTION:

The course is a unified approach to enhance language skills of learners with an aim to honetheir social skills and to increase their employability. The course is designed to acquaint the learners with the necessary LSRW (Listening/ Speaking / Reading/ Writing) skills It enables the learners improve their communication skills which are crucial in an academic environment as well as professional and personal lives.

COURSE OBJECTIVES

- This course trains the students in oral presentations, expository writing, logical organization and structural support.
- By acquiring skills in the use of communication techniques the students will be able to express better, grow personally and professionally, develop poise and confidence and achieve success.

SYLLABUS Hours: 30 Credits: 02

NO. OF UNITS	CONTENT	
I	BASICS OF ENGLISH GRAMMAR	8
	Vocabulary:- Synonyms, Antonyms, Prefix and suffix, Homonyms	
	, Tenses, subject verb agreement, common errors in English.	
II	LISTENING AND SPEAKING SKILLS	8
	Importance of listening and speaking.	
	Barriers in listening and speaking.	
	Good and persuasive listening and speaking	
	Note Taking, Watching Video Clips and Listening to Audio Clips,	
	Listening to and Watching News and Panel Discussions	
	JAM (Just-A-Minute), Oral Presentation, Group Discussion	
III	READING AND WRITING SKILLS	4
	Efficient and fast reading,	
	Importance of Skimming and Scanning	
IV	Letter Writing, Email, Essay, Paragraph writing, Articles, Memos, note making and Comprehension.	4
V	Common Medical Terminology and writing a medical report	6

COURSE OUTCOMES

- By the end of the course, the learners will be able to:
- Think critically, analytically, creatively and communicate confidently in English insocial and professional contexts with improved skills of fluency and accuracy.
- Write grammatically correct sentences employing appropriate vocabulary suitableto different

contexts

- Comprehend and analyze different academic texts.
- Make notes effectively and handle academic writing tasks such as Paragraph writing and Essay writing.
- Effectively handle formal correspondence like e-mail drafting and letter writing.

PROFESSIONALISM & VALUES SYLLARIS

SYLLABUS
Hours: 15 Credits: 01

NO. OF UNITS	TOPIC	NO. OF HOURS
I	Professional values Integrity, Objectivity, Professional competence and due care, Confidentiality	3
II	Personal values E ethical or moral values	3
III	Attitude and behavior Professional behavior, treating people equally	2
IV	Code of conduct Professional accountability and responsibility, misconduct	2
V	Differences between professions and importance of team efforts	2
*	Cultural issues in the healthcare environment	3

PRINCIPLES OF MANAGEMENT SYLLABUS Hours: 15 & Credits: 01

The course is intended to provide a knowledge about the basic principles of Management.

NO. OF UNITS	TOPICS	NO. OF HOURS
I	Introduction to management Strategic Management	3
II	Foundations of Planning Planning Tools and Techniques	3
III	Decision Making, conflict and stress management Managing Change and Innovation	3
IV	Understanding Groups and Teams Leadership	3
V	Time Management Cost and efficiency	3

SEMESTER - II

ANATOMY – II

INTRODUCTION:

Anatomy deals with the structural organization of human body. Anatomy forms the basis for the practice of medicine. Students need core knowledge of human anatomy as they venture into the clinical domain. The department of anatomy is committed to provide quality education for students by its fully-equipped facilities. Cadaveric dissections & specimens, histology slides and VARIOUS models provide the ideal environment to learnanatomy during the 1st year of their course.

COURSE OBJECTIVES:

The objective of this subject is to provide an outline of anatomy to improve the students understanding the technical and diagnostic procedures used, with special emphasis on limbs, thoracic and abdominal viscera, osteology, neuro anatomy, endocrine system, basic radiology.

SYLLABUS

Hours: Theory 30 & Practical 15

Credits: Theory 02 & Practical 0.5

NO. OF UNITS	CONTENT	No. OF HOURS
I	The Nervous system	9
	Review Structure of neurons; CNS, ANS and PNS (Central, autonomic and	
	peripheral) - Peripheral nerves , Brachial, Lumbar, Sacral plexus, Covering of	
	brain, Surfaces and lobes of cerebrum white fibers of cerebrum, cranial nerves,	
	brain stem, spinal cord - spinal nerves, functional areas of cerebral cortex,	
	Ventricular system – formation, circulation, and drainage	
II	Gastro Intestinal Tract	5
	Stomach morphology, blood supply, applied aspects	
	Liver morphology, ligaments blood supply applied aspects, porta hepatitis	
	Small and large intestine, appendix and appendicitis	
III	The Excretory system & Reproductive system	7
	Morphology, relations and internal Structure of kidney, urethra	
	Components of female reproductive system, Morphology of uterus and its supports	
	Parts of Fallopian Tube, Layers of scrotum, Anatomy of Testis and its coverings	
	Spermatic cord, Male urethra & its parts	
IV	The Endocrine system	5
	Endocrine glands, Structure of Hypothalamus, Pineal Gland, Pituitary gland-	
	Dwarfism	
	Thyroid- Goiter, Parathyroid, Pancreas – Diabetes Mellitus, Adrenal glands,	

	Gonads	
V	The Sensory organs	4
	Receptors, Structure of skin, Eye - Anatomy of orbit and eyeball, Anatomy of	
	Nose, Anatomy of ear, Anatomy of tongue	
Practica	l :	
NO.		
OF	CONTENT	No. OF HOURS
UNITS		110010
I	Histology of Liver, Thyroid, Kidney	3
II	Liver, Stomach, Intestines	3
III	Spleen, Kidney	3
IV	Brain, Spinal card	3
V	Bony Pelvis, Skull, Normal X- Rays, Surface markings	3

COURSE OUTCOMES:

- This course is aimed to make the student to gain knowledge in basic anatomy of various regions like limbs, thoracic and abdominal viscera, osteology, neuro anatomy, endocrine system, basic radiology which provides foundation in completion of the course.
- Enable to understand about the Gastro Intestinal Tract, location, surfaces, lobes, relations, and blood supply of Liver.
- Enables to understand about the Endocrine glands and explain the morphology and blood supply of Thyroid gland.

- 4. Understanding human anatomy & physiology- William Davis(McGraw-Hill)

PHYSIOLOGY – II

INTRODUCTION

Physiology is the study of functions and mechanisms in a living system. Physiology focuses on individual organs, cells, and biomolecules carry out the chemical and physical functions in a living system. Physiological state is the condition of normal function and this course helps in understanding the functions of endocrine system, renal physiology and reproductive physiology.

COURSE OBJECTIVES:

- To know about functions and physiological anatomy of endocrine system Thyroid, Adrenal, Parathyroid, Pituitary glands and Pancreas.
- To impart knowledge related to physiological structure of kidney and the nephron and its functions.
- To understand about reproductive system, process and methods of determination of ovulation.
- To know about types of joints, the structure and formation of cartilage and the structure and formation of bone.

SYLLABUS

Credits: Theory 03 & Practical 0.5

Hours: Theory 45 & Practical 15

NO. OF UNITS	CONTENT	No. OF HOURS
I	Cardiovascular System	12
	1. Describe the gross structure of heart and the normal circulation of blood	
	2. Describe the cardiac cycle	
	3. Describe the normal arterial pulse wave and the normal heart rate,	
	and factors increasing and decreasing it.	
	4. Describe normal Blood pressure and its regulation,	
	5. Describe the normal Heart sounds	
	6. Describe the normal ECG and its importance	
II	Endocrine Physiology	10
	1. Describe the physiological anatomy of Thyroid gland, functions and its applied physiology	
	2. Describe the physiological anatomy of Adrenal gland, functions and its applied physiology	
	3. Describe the physiological anatomy of Parathyroid gland, functions and its applied physiology	
	4. Describe the physiological anatomy of Pancreas, its functions and its applied physiology	
	5. Describe the physiological anatomy of hypothalamus and the Pituitary gland, their functions and its applied physiology	
III	Excretory Physiology	10
	1. Describe the physiological structure of kidney and the nephron and its	
	functions	
	2. Describe the GFR and factors affecting GFR	

	3. Describe the Substances absorbed and secreted from renal tubules	
	4. Describe the various Renal function tests5. Describe briefly the Urinary bladder and its functions and the physiology	
	of micturition	
	6. Functions of skin	
	7. Acid base balance	
IV	Reproductive Physiology	06
	Describe the physiology of puberty	
	2. Describe the process of menstruation, normal menstrual cycle,	
	menarche and menopause.	
	3. Describe briefly the process of ovulation and methods of determination of ovulation	
	4. Describe briefly the normal physiology of pregnancy and mention	
	the diagnostic tests for pregnancy and their physiological basis	
	5. Describe briefly the functions of placenta and pregnancy diagnostic tests	
	6. List out the Contraceptive methods in male and female	
	7. Describe the Spermatogenesis	
V	Central Nervous System	07
	1. Describe the physiological anatomy of the brain and functions of	
	different lobes	
	2. Describe briefly the structure and functions of spinal cord3. Describe briefly the subdivisions of brain stem and their functions	
	4. Describe briefly the special senses and their pathways – vision, audition	
	(& olfaction & taste)	
	5. Describe the normal EEG	
	6. Describe briefly the CSF formation, circulation, properties, composition	
	and functions	
PRACTIC	AL	
NO. OF UNITS	CONTENT	NO. OF HOURS
I	General examination – Brief history, General appearance, Vital data	02
II	Pulse and BP	03
III	Demonstrate examination of heart – inspect JVP, localize apex beat, look for any abnormal pulsations, percuss cardiac dullness, auscultate heart for normal sounds	02
	Demonstrate examination of respiratory system – inspect the chest for	02
IV	symmetry, movements, localize apical impulse and trachea, measure chest expansion, percuss the chest for lung resonance, liver dullness, auscultate	
	lungs for breath sounds	
V	Demonstrate examination of the cranial nerves	02
VI	Demonstrate the various sensory and motor reflexes - abdominal, plantar, biceps, triceps, supinator, knee, and ankle	02
VI		02

BIOCHEMISTRY

INTRODUCTION:

Biochemistry deals with the structures, bonding, functions, and interactions of biological macromolecules, such as proteins, nucleic acids, carbohydrates, and lipids. They provide the structure of cells and perform many of the functions associated with life. Biochemistry focuses on understanding the chemical basis which allows biological molecules to give rise to the processes that occur within living cells and between cells, in turn relating greatly to the understanding of tissues and organs, as well as organism structure and function.

COURSE OBJECTIVES:

Students must understand the basic principles of Biochemistry and the biochemical processes that take place in the human body and their applied aspects.

SYLLABUS

Hours: Theory 30 & Practical 15 Credits: Theory 02 & Practical 0.5

NO. OF UNITS	CONTENT	NO. OF HOURS
I	Enzymesi. Define and classify with examples, active site, cofactor, proenzymeii. List the factors affecting enzyme activity	3
	Define isoenzymes, enzymology (clinical significance of enzymes)	
II	i.Define carbohydrates, classify carbohydrates with examples, explain glycosidic bond ii.Illustrate composition, sources, and functions of monosaccharides, disaccharides, oligosaccharides, and polysaccharides. iii.Illustrate glycolysis-aerobic, anaerobic, citric acid cycle, substrate phosphorylation iv.Elaborate glycogen metabolism -glycogenesis, glycogenolysis,	4
	v.Summarize hormonal regulation of glucose, glycosuria, diabetes mellitus	
III	 Lipid Chemistry & Metabolism i. Define and classify lipids ii. Functions of Fatty acids, Triacylglycerol, Phospholipids, cholesterol 	4

	iii. Essential fatty acids and their importance	
	iv. Explain Lipoproteins: definition, classification, function, ketone bodies	
	v. Fat metabolism in adipose tissues	
	vi. Elaborate ketone body metabolism: formation(ketogenesis),	
	utilization(ketolysis), ketosis, Rothera's test	
	vii. Summarize cholesterol metabolism: synthesis, degradation,	
	cholesterol transport	
	viii. viii.Define Hypercholesterolemia, list its effects, causing agents	
	common hyperlipoproteinemia, Lipoproteins	
	ix. ix. Explain about fatty liver	
	a) Amino -acid Chemistry & Amino acid and protein metabolism I. Define and classify amino acids	
	II. Define peptides and explain peptide bonds, list the biologically	3
IV	important peptides.	
	III. Define and classify proteins, enumerate functions of proteins.	
	IV. Define Catabolism of amino acids- transamination, deamination	
	V. Illustrate fate of ammonia, transport of ammonia, Urea cycle	
	b) Hormones	2
	VI. Outline the specialized products formed from amino acids	
	Hormones basic concepts in metabolic regulation with examples (Insulin)	
	a) Vitamins	
	I. Define vitamins and classify them according to solubility	
V	II. List the sources, Coenzyme forms, functions, Recommended	
	Dietary Allowance (RDA)	4
	III. Tell about digestion, absorption and transport, deficiency and	·
	toxicity of individual vitamins	
	b) Mineral metabolism	
	IV. Define minerals and list the sources for mineral and their	
	Recommended Dietary Allowance	4
	V. Tell about digestion, absorption, transport, excretion of various	4
	minerals	
	VI. List the functions and disorders of individual minerals – Calcium,	
	phosphate, iron, magnesium, manganese, fluoride, selenium, zinc,	
<u> </u>	1	

		molybdenum, copper	
	a) Ac I.	id-base balance Define acid, base and pH	
	II.	Handerson Hassel Balch equation, indicators	4
VI	III.	Define buffers and describe buffer systems of the body (bicarbonate	
, , ,		buffer system)	
	IV.	Elaborate about the role of lungs and kidneys in acid-base balance.	
	V.	Acid base disorders	
	b) Fu	nction Tests	2
	I.	Describe the biochemical functions of kidney and the principal	2
		Renal Function Tests	
	II.	ii. Describe the biochemical functions of liver and the principal	
		Liver Function Tests	

NO. OF UNITS	PRACTICAL TOPICS – DEMONSTRATIONS	NO. OF HOURS
I	 a. Lab safety b. Lab apparatus: Glassware, centrifuge, colorimeter, spectrometry, Electrophoresis, Chromatography and Radio isotopes: application in medicine and basic research. 	3
II	Sample Collection a. Blood, Anticoagulants b. Random urine sample, 24 hours urine sample, Preservatives	1
III	Preparation of Solutions (Molar, Normal, Percentage and Saturated) Preparation of Buffers, pH determination	2
IV	Reactions of Carbohydrates (Practical) (Glucose, Fructose, Lactose, Sucrose)	3
V	Urine Analysis – Normal constituents (Organic & Inorganic) & Abnormal constituents by Dipstic method (Practical)	2
VI	Clinical Significance of - Blood Glucose, Blood Urea, Serum Creatinine, Electrolytes, Serum bilirubin, Lipid profile and ABG.	4

MEDICAL LAW AND ETHICS <u>SYLLABUS</u>

Hours: Theory 15 Credits: Theory 01

Legal and ethical considerations are firmly believed to be an integral part of medical practice in planning patient care. Advances in medical sciences, growing sophistication of the modern society's legal framework, increasing awareness of human rights and changing moral principles of the community at large, now result in frequent occurrences of healthcare professionals being caught in dilemmas over aspects arising from daily practice.²⁸

Medical ethics has developed into a well based discipline which acts as a "bridge" between theoretical bioethics and the bedside. The goal is "to improve the quality of patient care by identifying, analyzing, and attempting to resolve the ethical problems that arise in practice". Doctors are bound by, not just moral obligations, but also by laws and official regulations that form the legal framework to regulate medical practice. Hence, it is now a universal consensusthat legal and ethical considerations are inherent and inseparable parts of good medical practice across the whole spectrum. Few of the important and relevant topics that need to focus on are asfollows:

NO. OF UNITS	TOPICS	NO. OF HOURS
I	1. Medical ethics - Definition - Goal - Scope	3
	2. Introduction to Code of conduct	
	3. Basic principles of medical ethics – Confidentiality	
II	4. Malpractice and negligence - Rational and irrational drug therapy	3
	5. Autonomy and informed consent - Right of patients	
	6. Care of the terminally ill- Euthanasia	
III	 7. Organ transplantation 8. Medico legal aspects of medical records – Medico legal case and type- Records and document related to MLC - 	3
	ownership of medical records - Confidentiality Privilege communication - Release of medical information - Unauthorized disclosure - retention of medical records - other various aspects.	
IV	9. Professional Indemnity insurance policy10. Development of standardized protocol to avoid near miss or sentinel events	3
V	11. Obtaining an informed consent.	3

BASICS OF EMERGENCY MEDICINE SYLLABUS Practical Hours: 360 & Credits 12

NO. OF UNITS	TOPICS	NO. OF HOURS
I	TRIAGE AND GENERAL EMERGENCIES	360
	Concepts and principles of Triage	
	Role of triage person Output Description:	
	Coordination and involvement of different departments and facilities	
II	Principles of emergency management TYPES OF DISASTER	
11	Natural and Man made	
	Earthquakes, Floods, Epidemics, Cyclones Fire, Explosion, Accidents, Violence, Terrorism; biochemical, War	
	Policies related to emergency/disaster management;	
	 International, national, state, institutional Disaster preparedness: 	
	Team, Guidelines, protocols, Equipments, Resources	
	 Coordination and involvement of Community, various 	
	govt. departments, non- government.	
	Organizations and International agencies	
	Legal Aspects of Disaster	
	• Impact on Health and after effects: PTSD Rehabilitation;	
	physical, Psychosocial, Financial, Relocation Concept, Priorities, , priorities,	
	• principles and Scope of emergency care Organization of emergency services: physical setup, staffing, Equipment and supplies, protocols.	
III	LIFE SUPPORT & RESUSCITATION	
	Basic life support in perspective	
	Cardiopulmonary function and actions for survival Adult Basic life	
	support, Advanced Cardiac life supportPediatric Basic Life support	
	Special resuscitation situations(drowning, hanging, Pregnancy)Safety	
	during CPR training and actual rescue	
IV	BASIC PRINCIPLES OF TRAUMA CARE The principles of kinetic energy Mechanism	
	Basic mechanics of InjuryPattern.	
	Primary survey Secondary survey as appropriate assessment	
	Identification of Life threatening injuries	
	Shock –different types & Categories	
	Revised trauma score,	
	Glasgow Coma Score	
	Lifting & transporting of injured persons	
	Splints and Immobilization	
V	• 12 Lead ECG	

- Interpretation of normal ECG
- IV cannulation
- blood sampling
- Triage

Transportation of patients(Spine board and Scoop board) BLS ACLS Biomedical waste disposeSplinting Immobilization

SEMESTER – III BASICS OF PATIENT CARE

INTRODUCTION:

This course develops knowledge and skills basic to patient care undergoing radiographic procedures. Topics include patient communication, patient assessment, and safety of patient and healthcare provider in the health care facility. Focus extends to include properbody mechanics and patient positioning to promote comforting for patient. Basics of infection control and methods of medical asepsis were focused on especially when dealing with patients undergoing certain invasive procedures. Finally describe and perform basic procedures like injections, Ryle's tube, Foley's catheterization, taking blood samples, wound dressing etc.

COURSE OBJECTIVES:

- 1. Students will gain understanding of the fundamental concepts of patients care while in the hospital or undergoing a special procedure.
- 2. Students will become familiar with some procedures relevant to patient condition
- 3. Students will Be able to provide certain basic procedures and identify symptoms of altered cognition.
- 4. Students will be able to relate them to patient overall health and well being.
- 5. Relationship between certain procedures, radiographic procedure, and patient overall health will be emphasized.

SYLLABUS:

LEARNING OUTCOMES:

The main Intended Learning Outcome (ILO) that is measured throughout this course is "Critical Thinking." This ILO is conceptually defined as "a cognitive process that aims at using the rational and logical examination of ideas for the purposes of understanding, problem solving, and decision-making." Critical thinking will facilitate the process of teaching/ learning, which is originally a change in thinking or behaviour.

- I- Caring
- **II-** Communication
- III- Critical thinking
- IV- Therapeutic intervention
- V Leadership
- VI- Employer's satisfaction

SYLLABUS

Theory: 30hrs and 2 Credit

NO. OF UNITS	CONTENT	NO. OF HOURS
	Describe the principles of careof bedridden patient	
	- Care of a bedridden patient	
	- Patient assessment	
	- Assessing personal concerns of patient	
	- Assessing physiological needs	
	Assessing current physical status	
I	Describe the basicprinciples of communication	2
	Communication with patients and attendants	3
	- Communication skills	
	- Communication with patients	
	- Special circumstances in communication	
	- Patient education	
	- Communication with patient's families	
	Dealing with death and loss	
	Describe and demonstrate techniques to maintain patient hygiene	
	Patient hygiene	
	- Cycle of infection	
	- Body's defence against infection	
	- Infectious diseases	
II	- Maintaining hygiene	
11	Describe and practice infection control measures	3
	in the ward and ICU	
	Infection control measures in the ward and ICU	
	- Microorganisms	
	- Cycle of infection	
	- Hand Washing	
	Preventing disease transmission	

	Describe and record vital data and basic clinicalparameters	
	Vital data and basic clinical parameters	
	-Assessment of body temperature: sites, equipments and	
	techniques, special considerations

	Communication within the HealthCare Team,	
	- Types of records; ward records, medical/nursing records,	
	Common Record-keeping forms,	
	Computerized documentation	
	Describe and demonstrate useof basic hospital equipment	
	Use of basic hospital equipment	

COURSE OUTCOMES:

- 1. Perform basic infection control practices in the Healthcare setting.
- 2. Use effective skills to draw blood and accurately label tubes
- 3. Perform basic procedures using advanced technique and interpretation.
- 4. Perform basic patient care skills.
- 5. Communicate with a diverse patient population using written and oral communication and listening skills in interactions.

MICROBIOLOGY

INTRODUCTION:

The goal of teaching Microbiology is to provide understanding of the natural history of infection and diseases in order to deal with the Etiology, pathogenesis, Pathogen city, laboratory diagnosis, treatment control and prevention of these infections and infectious diseases.

COURSE OBJECTIVES:

- Plan and interpret Laboratory investigations for diagnosis of infectious diseases and correlate the clinical manifestations with the etiological agent.
- Perform simple laboratory test which help to arrive at rapid diagnosis.
- Understand methods of disinfection and sterilization and their application to
- Control and prevention of hospital acquired infections.

SYLLABUS

Credits: Theory 04 & Practical 0.5

Hours: Theory 60 & Practical 15

NO. OF UNITS	TOPICS	NO. OF HOURS
I	General Bacteriology	4
	Morphology	
	Classification of microorganisms, size, shape and	
	structure of bacteria.	
	Use of microscope in the study of bacteria	
	Growth and nutrition	
	 Nutrition, growth and multiplication of bacteria 	
	Culture media, Culture methods & AST	
	Immunology	8
	Immunity & types of immunity	
	Antigen & Antibody	
	Antigen-Antibody reactions	
	Structure & functions of immune system	
	Immune response	
	Hypersensitivity	
	Autoimmunity	
	Vaccines & National Immunization schedule	
	Systematic Bacteriology	18
	Staphylococci, Streptococci, Pneumococci, Gonococci,	
	Meningococci, C. diphtheriae, Mycobacteria, Clostridia,	
	Bacillus, Shigella, Salmonella, E. coli, Klebsiella, Proteus,	
	Vibrio cholerae, Pseudomonas & Spirochetes.	

	Miscellaneous bacteria	
II	Sterilization and Disinfection	2
	 Principles and use of equipment of sterilization namely hot air 	
	oven, autoclave and serum inspissator, pasteurization.	
	Chemical methods of sterilization (like ETO & Plasma	
	sterilization)	
	Disinfectants and Antiseptic agents used in the hospital.	2
	Hospital Infection	2
	HAIs- prevention and control (Standard procoutions, Transmission based procoutions & Bundle)	
	(Standard precautions, Transmission based precautions & Bundle care).	
	Principles and practice of Biomedical waste management	1
III	Parasitology	10
	Morphology, life cycle, laboratory diagnosis of following parasites:	10
	2. instolytica	
	Free living amoeba	
	Hydatid disease	
	• Plasmodium	
	Tape worms	
	Intestinal nematodes	
	Somatic nematodes	
IV	Mycology	5
	General Mycology	
	Superficial Mycoses	
	Subcutaneous Mycoses	
	Systemic Mycoses	
	Opportunistic fungi	
V	Virology	10
	General Virology	
	• Herpes	
	• Arbo viruses	
	Influenza, Parainfluenza, Corona	
	• Hepatitis	
	• HIV	
	• Rabies	
	Poliomyelitis.	

PRACT	ICALS

I	Specimen collection and handling	2
	Microscopy & Hanging drop preparation	1
	Slide preparation and staining	3
	Gram staining	
	 Acid fast staining 	
	KOH mount	1
	 Fungal culture 	

II	Serology	1
	Rapid tests	
	ELISA demo	
III	Standard precautions-	1
	Hand hygiene	
	PPE (donning & doffing)	1
	Spill management	1
	NSI (Needle stick injury)	
	Cough etiquette	1
	Safe injection practices	
IV	Sterilization & Disinfection of instruments	2
V	Biomedical waste management	1

COURSE OUTCOMES:

- Knowledge about the association of Micro-organisms in Disease and Health Requirement and the common pathogens of Medical importance
- Know about the commonly used Microbiology Laboratory equipment and thecleaning of glassware
- Know about Collection, Transportation and processing of clinical samples for Microbiological Investigations
- Knowledge about Sterilization and Disinfection practices
- Development of skills of Media pouring
- Slide and Smear preparation
- Performing Staining techniques in Microbiology (Simple staining, Gram's staining, AFB staining)

PATHOLOGY

INTRODUCTION

The goal of teaching Pathology is to provide comprehensive knowledge of the causes and mechanisms of the duties in order to enable to achieve complete understanding of the natural history and clinical manifestation of the diseases.

COURSE OBJECTIVES:

- To describe the rationale and principles of technical procedures of diagnostic laboratorytests.
- To know about basic diagnostic tests and correlate with clinical and morphological features of diseases.
- To learn about commonly used bedside tests on blood, urine and other relevant samples.

SYLLABUS

	problems	
	(Meter dose inhaler, nebuliser)	
	Mechanical ventilator - General principles, Basic modes of	
	ventilation, NIV	

PRACTICAL TOPICS	NO. OF HOURS
Clinical Procedures in Emergency room	
Vital Sign Measurement:	
Pulse assessment	
Respiratory assessment	
Temperature assessment	
Blood pressure assessment	
RECOGNITION AND ASSESSMENT :	
Identifying signs and symptoms of respiratory distress and	
failure, such as increased work of breathing, cyanosis, altered	
mental status, and abnormal breath sounds.	
Performing rapid respiratory assessment including respiratory	
rate, oxygen saturation, and auscultation of lung fields.	210
AIRWAY MANAGEMENT :	
Techniques for establishing and maintaining a patent airway,	
including head-tilt-chin-lift maneuver, jaw thrust maneuver, and	
use of adjuncts like oropharyngeal and nasopharyngeal airways.	
Advanced airway management skills, including endotracheal	
intubation and supraglottic airway device insertion.	
OXYGEN THERAPY:	
Administration of supplemental oxygen using various delivery	
devices (nasal cannula, simple face mask, non-rebreather mask,	
etc.).	
Monitoring oxygenation with pulse oximetry and interpretation	
of oxygen saturation levels.	

VENTILATORY SUPPORT:

Techniques for assisting ventilation, including bag-mask ventilation and use of mechanical ventilators in acute respiratory failure.

Understanding indications for invasive and non-invasive positive pressure ventilation (CPAP, BiPAP).

MEDICATION ADMINISTRATION:

Administering bronchodilators (e.g., albuterol) and corticosteroids in acute exacerbations of asthma and chronic obstructive pulmonary disease (COPD).

Using medications such as epinephrine for severe allergic reactions causing respiratory distress.

RESUSCITATION SKILLS:

Performing effective cardiopulmonary resuscitation (CPR) in cases of respiratory arrest, integrating chest compressions and ventilation.

Recognizing and managing complications during resuscitation efforts.

SPECIAL POPULATIONS:

Managing respiratory emergencies in pediatric patients, including assessment techniques and age-appropriate interventions.

Addressing respiratory emergencies in elderly patients and those with underlying chronic respiratory conditions.

SEMESTER - IV

PHARMACOLOGY

INTRODUCTION

Basic drug effect, classification of drugs acting on nerves, heart, blood pressure, respiratory system, gastrointestinal system, kidneys, hormones, musculoskeletal system and analgesics etc., Common drugs-effects and side effects and drug interactions.

COURSE OBJECTIVES:

This course will cover general pharmacology with special emphasis on common drugs used, route of administration, types of formulations, dose and frequency of administration, side effects and toxicity, management of toxic effect, drug interaction, knowledge of chemical and trade names, importance of manufacture and expiry dates and instructions about handling each drug.

SYLLABUS

Credits: Theory 02
Hours: Theory 30

NO. OF UNITS	TOPICS	NO. OF HOURS
	General Pharmacology	
	1. Routes of drug ministration	1
I	2. Pharmacokinetics, Pharmacodynamics, Factors modifying drug action (FMDA in brief)	2
	3. Adverse Drug Reactions & Drug interactions	1
	4. Therapeutic drug monitoring(TDM), Pharmacogenomics & Drug usage in Special Population	1
	Drugs acting on Nervous System	•
	Cholinergic drugs & Anticholinergic drugs	1
	2. Sympathomimmetics	1
	3. Antiadrenergic drugs & Drugs for Glaucoma	2
II	4. Drugs acting on Somatic nervous system- Skeletal Muscle Relaxants	1
	5. General Anaesthetics	1
	6. Local Anaesthetics	1
	7. Sedative – Hypnotics & Ethyl & Methyl Alcohols	1
	8. Opioid analgesics & antagonists, Anti manic dugs- Lithium	1

	Systemic Pharmacology (Drugs Acting on Cardio Vascular S Respiratory System, Gastrointestinal System and Blood)	System,
	1. Diuretics	1
	2. Antihypertensive drugs	1
III	3. Treatment of Angina& Congestive Heart Failure	1
	4. Treatment of Bronchial Asthma	1
	5. Antiemetic drugs	1
	6. Coagulants	1
	7. Anticoagulants& Growth factors	2
	Hormones and Related Drugs	
IV	1. Treatment of Diabetes Mellitus	2
1 4	2. Corticosteroids	1
	Chemotherapy and Miscellaneous.	
17	1. Antimicrobials in brief & Immunomodulators	3
V	2. Antivirals & Antifungals	1
	3. Drugs used in emergency conditions	1

COURSE OUTCOMES:

At the end of course, students should know about

- Pharmacokinetics and pharmaco dynamic principles of drugs
- Drugs acting on autonomic nervous system
- Drugs modulating autacoids
- Drugs used in cardiovascular and hemodynamic disorders.
- Drugs acting on renal system

PRACTICAL TOPICS	NO. OF HOURS
OBSTETRIC Postpartum Hemorrhage: Techniques for managing excessive	120
bleeding following childbirth, including uterine massage, administration of uterotonic medications (e.g., oxytocin), and surgical interventions if necessary.	
Pre-eclampsia and Eclampsia: Recognition of signs and symptoms, management of hypertension, and seizure management if eclampsia occurs.	
Obstetric Emergencies During Labor: Techniques for managing complications such as shoulder dystocia, umbilical cord prolapse, and emergency cesarean section.	
Cannulating Umbilical Vein Indication	
 Procedure Drugs through intraosseous line 	
Complication	
GYNECOLOGIC	
Ectopic Pregnancy: Diagnosis and management of ectopic pregnancies, including medical and surgical interventions.	
Acute Pelvic Pain: Evaluation and management of conditions causing acute pelvic pain such as ovarian torsion, ruptured ovarian cysts, and pelvic inflammatory disease.	
Vaginal Bleeding: Assessment and treatment of abnormal vaginal bleeding, including miscarriage management and control of bleeding from gynecologic causes.	
MEDICAL AND SURGICAL PROCEDURES: Intrauterine Device (IUD) Complications: Management of complications such as expulsion, perforation, or embedded IUDs. Emergency Contraception: Counseling and administration of	

miscarriage or evacuation of retained products of conception.

COMMUNICATION AND PATIENT CARE:

emergency contraception options.

Patient Counseling: Effective communication with patients and their families about diagnoses, treatment options, and potential outcomes.

Surgical Emergencies: Techniques for performing emergent gynecologic surgeries, such as dilation and curettage (D&C) for

Supportive Care: Providing emotional support and reassurance to

patients experiencing obstetric or gynecologic emergencies.

PAEDIATRIC

Recognition of Pediatric Emergencies: Identifying signs and symptoms of common pediatric emergencies such as respiratory distress, seizures, shock, and cardiac arrest.

Age-Specific Assessment: Understanding differences in assessment techniques and vital signs interpretation based on the child's age, from neonates to adolescents.

Resuscitation Skills: Practicing pediatric cardiopulmonary resuscitation (CPR) techniques including chest compressions, airway management (including specialized techniques for infants and children), and defibrillation if appropriate.

- 4. Medication Administration: Learning safe and accurate administration of medications commonly used in pediatric emergencies, considering dosages based on weight and age.
- 5. Trauma Management: Handling traumatic injuries specific to pediatric patients, including head injuries, burns, and fractures.
- 6. Communication and Family Interaction: Developing skills in communicating effectively with parents or caregivers during stressful situations, including obtaining medical history and consent.
- 7. Team Coordination: Practicing teamwork and coordination among healthcare providers during pediatric emergencies, including roles and responsibilities allocation.

Intraosseous Infusion

- Indication
- Procedure
- Drugs through intraosseous line
- Complication

PRACTICAL TOPICS	NO. OF HOURS
TRAUMA	120
1. Major Trauma Assessment: Students practice systematic assessment and management	
of patients with severe trauma, including airway management, bleeding control, and	
spinal precautions.	
2. Trauma Team Simulations: Simulated scenarios where students take on roles in	
trauma teams to manage complex cases under time pressure.	
3. Wound Management: Techniques for wound cleaning, closure (suturing or stapling),	
and dressing.	
4. Fracture Management: Splinting techniques for various types of fractures.	
5. Airway Management: Practice with airway adjuncts such as oropharyngeal and	
nasopharyngeal airways.	
6. Analysis and discussion of real-life trauma cases, focusing on decision-making,	
triage, and management strategies.	
TOXICOLOGY:	
1. Simulation of Toxicological Emergencies: Students manage cases involving	
ingestion, inhalation, or exposure to toxins (e.g., drugs, chemicals, plants).	
2. Toxicokinetics and Management: Understanding absorption, distribution,	
metabolism, and excretion of toxins and applying appropriate treatment strategies.	
3. Toxicological Screening: Interpretation of toxicology screens (e.g., urine drug	
screens, blood alcohol levels).	
4. Identifying Toxins: Techniques for identifying common toxins using clinical signs,	
symptoms, and diagnostic tests.	
5. Students present and discuss cases of acute and chronic poisoning, emphasizing	
clinical findings, differential diagnosis, and management plans.	
6. Acting out scenarios involving toxic exposures to practice communication skills,	
history-taking, and patient management.	

EMERGENCY MEDICATION <u>SYLLABUS</u>

Hours: Theory 60 & Practical: 120

Credits: Theory 04, Practical: 04

NO. OF UNITS	CONTENT	NO. OF HOURS
I	Instrumentation In Emergency Services	12
	• Introduction to Biomedical engineering (Man – machine relationship)	
	• ECG	
	• Defibrillator	
	Intravenous pumps	
	• Laryngoscope, ambubag, suction machine SPO2 monitoring,	
	Temperaure monitoring	
II	BP apparatus, BP monitoring-NIBP, IBP	12
	Ventilators-Intensive care, portable Manual resuscitator	
	Radiology equipment &radiation hazards	
	Suction apparatus	
	• Nebuliser	
	Medical gases	
	Ambulance and its power supply	
	Dialysis machine	
	Infant warmer & incubator	
III	Emergency Drugs – I	12
	Drug introduction, indication, contra-indications, side – effects and routes of	
	administration with doses of drugs	
IV	Emergency Drugs – II	12
	Adrenaline (Epinephrine)	
	Aspirin	
	Atropine	
	Adenosine	
	Amiodarone	
	• Antidotes	
	Benzylpenicilin	
	Beta blockers- Esmolol/Metoprolol/Lebatolol	

	Calcium channel blockers- Verapamil/Diltiazem/Nifidipine/Amlodipnle	
	Calcium chloride	
	Calcium gluconate	
	Chlorpromazine	
	• Diazepam	
	Dexamethasone	
	• Dextrose	
	• Dopamine	
	Dobutamine	
	Furosemide	
V	Emergency Drugs – III	12
	• Flumazenil	
	Fentanyl	
	Glucagon	
	Glyceryl trinitrate	
	Hydrocortisone	
	Lidocaine	
	• Lorazepam	
	Mannitol	
	Morphine Sulphate	
	Midazolam	
	Naloxone hydrochlorideNorepinephrine	
	Phenytoin	
	Paracetamol	
	• Salbutamol	
	Sodabicarbonate	
	 Vasopressors 	
	Drugs in obstetrics – Oxytocin/Methergine/CarboprostIV fluids	
	Potassium Chloride	
	Succinyl choline	
	Atracurium	
	Vecuronium	
	• Propofol	
	Ketamine	

Tranexamic acid Magnesium Sulphate

PRACTICAL TOPICS	NO. OF HOURS
Drug Identification: Being able to quickly identify the correct medication based on the scenario and patient condition.	120
Dosage Calculation: Calculating the appropriate dosage based on patient weight, age, and condition.	
Route of Administration: Knowing the correct route (oral, intravenous, intramuscular, etc.) and technique for administration.	
Safety Protocols: Following safety protocols such as checking patient allergies, verifying drug compatibility, and ensuring proper administration techniques.	
Monitoring and Assessment: Understanding how to monitor the patient's response to the medication and assessing for any adverse effects or complications. Intraosseous Infusion	
Indication	
Procedure	
 Drugs through intraosseous line 	
Complication
